                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for screening a bioactive agent capabl of interfering with the binding of a tankyrase H cell Cycle protein and p21. The invention is useful in gene therapy. The method is useful for screening for a bioactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for preparing a composition for diagnosing or treating cancer. The present sequence is human tankyrase homologue isotype 2 (TaHo-2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening for a bioactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for diagnosing or treating cancer by combining a tankyrase H cell cycle protein, a candidate bioactive agent and p21.

```
The invention relates to a recombinant polypeptide (I) such as cell cycle protein e.g. tankyrase homologue (TaHo), comprising an amino acid sequence having 85% or more sequence identity to the 1065 amino acid sequence having 85% or more sequence identity to the 1065 amino acid sequence of ADY97761 or the 1240 amino acid sequence of ADY97762. Also described: (1) diagnosing cancer, which involves determining the activity of (I) from a test sample of an individual and individual with a cell cycle control with a control; (2) treating (M1) an individual with a cell cycle related disorder, which involves administering to the individual an inhibitor of TaHo; (3) a recombinant nucleic acid (II) encoding (II).

CC related disorder, which involves administering to the individual an inhibitor of TaHo; (3) a recombinant nucleic acid (II) encoding (II).

CC comprising a nucleic acid that hybridizes under high servingent confidence of ADY97759 or a nucleic acid having 85% or the 3816 base pair sequence of ADY97759, or a nucleic acid having 85% or comprising (II) operably linked to regulatory sequences recognized by a host cell (IV) transformed with the nucleic acid; (5) a host cell (C); and sequence identity to ADY97759 or ADY97760; (4) an expression vector (III) comprising (II) or (III); (6) producing (I); (7) a polypeptide that specifically binds to (I); and (8) inhibiting divalence contacting the tumor with a bloactive agent capable of inhibiting TaHo activity. (I) is useful for screening a bioactive agent capable of interfering with the binding of (I) and P21. (M1) is useful for treating an individual with a cell cycle related disorder. (M2) is useful for individual with a cell cycle related disorder. (M2) is useful for inhibiting growth of a tumor cell by a bioactive agent e.g. antisense

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequence for the human tankyrase2 protein. This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding protein. The regulation of telomerelength, in which TRF1 has a role, is linked to ageing and cancer. The sequences are useful in the treatment of cancers and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mediated by cancers,

This invention describes novel cytostatic polymucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, contrarefering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptendar against the polypeptide; an organic molecule of molecular preferably humanised or human; an anti-idictype, non-human catanished, preferably humanised or human; an anti-idictype, non-human polypeptide, and are reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic ancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   845
prostatic cancer patients, or subjects at risk, were incubated sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained strongly but non-malignant cells only weakly. In 15 of 63 samples of adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR66554 represent the polymucleotide and polypeptide sequences used in the method of the

corrections over transcription or ver expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences in prostatic tissue. Screening for inhibitors of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polymeptide; an aptamer against the polymeptide; a (monoclonal) antibody (Ab) against the colymeptide, preferably humanised or human; an anti-idotype, non-human (monoclonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated second antibody; streptavidin-conjugated horseradish percentially with anti-human CD4 murine monoclonal antibodies; blocking become antibody; streptavidin-conjugated horseradish cancer patients, or subjects at risk, were incubated second antibodies; become antibodies; strongly but non-mailignant cells only weakly. In 15 of 51 samples were counterstained with hemalum (blue). Malignant cells stained sequenced by many one metalignant cells only weakly. In 15 of 53 samples of adenocacinoma, membrane and cytoplasmic staining was very strong, and incoming polymucleotide and polypeptide sequences used in the method of the developing prostatic cancer. Diagnosis is based on 88888888888888888888888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                KFTPLHEAAAKGKYEICKLLLQHGADPTKKNRDGNTPLDLVKDGDTDIQDLLRGDAALLD 725
                                                                                                                                                                                                          The present invention provides the protein and coding sequence for the human tankyrase2 protein. This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding protein. The regulation of telomere length, in which TRP1 has a role, is linked to ageing and cancer. The sequences are useful in the treatment of cancers and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       65

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               971
The present invention provides the protein and coding sequence for the human tankyrase2 protein. This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding procein. The regulation of telomere length, in which TRF1 has a role, is linked to against and cancer. The sequences are useful in the treatment of cancers and inflammatory
                                                                                                                                                                                                   9

This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyzase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding protein. The regulation of telomere length, in which TRF1 has a role, is linked to ageing and cancer. The sequences are useful in the treatment of cancers and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mediated by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequence for the human tankyrase2 protein. This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding protein. The regulation of telomere length, in which TRF1 has a role, is linked to againg and cancer. The sequences are useful in the treatment of cancers and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

RESULT 12 ADR14792 ADR14792

```
The specification describes a method for identifying a candidate

adenomatous polyposis coli protein (APC) and axin pathways modulating

agents. The method comprises providing an assay system comprising a

modifier of APC and axin (MAPCAX) polypeptide or nucleic acid, contacting

confider of APC and axin (MAPCAX) polypeptide or nucleic acid, contacting

the assay system with a test agent, the system provides a reference acitivity, and

detecting a test agent. biased activity of the assay system, where a

difference between the test agent as a candidate APC and axin pathways

contivity identifies the method is useful in identifying a candidate

adenomatous polyposis coli protein (APC) and a pathways modulating agent,

which are useful for preparing a composition for diagnosing or treating

cancer. The present sequence represents a human orthologue of a

cancer. The present sequence represents a human orthologue of a

The present sequence is a version of the human tankyrase II protein sequence. The protein is thought to be involved in signal transduction in the cell, and to have binding activity for other telomere-associated proteins. It is possible that it plays a role in the regulation of telomere length, thus affecting the replicative ability of the cell. The protein is useful for ribosylating target proteins, for determining tankyrase II binding activity in a sample, and for modulating telomere
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  134

Human polypeptide SEQ ID NO 1504

XUXHXMXXXXXXX

(first entry)

20-JAN-2003

```
The invention relates to an isolated polymucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-CABZ1066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polymucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers as a food supplement, for generating antibodies, in medical mapping, screening and diagnostic assays and for treating cell-captive diseases (antiple sclerosis, corpliferative diseases (antiple sclerosis, diabetes, lupus) genetic disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parastic), arthritis, etc. Note: The sequence data for this patent did not form part directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            194

The present sequence is human tankyrase homolog protein (THP). The THP polypeptides and polymucleotides of the invention are useful in gene therapy and for treating or preventing unregulated cell growth such as cancer or tumour (e.g. basal cell carcinoma). The nucleic acid molecules of the invention and their fragments are useful for restriction fragment length polymorphism (RFLP) associated with certain disorders, as well as for genetic mapping. Antisense oligomucleotides, or fragments of nucleic acid encoding THP are useful as diagnostic tools for probing the expression of Thp gene in various tissues. THP can be used as antigens for raising antibodies against them and in assays for identifying compounds that modulate their activity. They are used in the manufacture of a medicament directed towards cancers or tumours. THP are also useful for screening compounds in a variety of drugs screening techniques and as a research tool for identification, characterisation and purification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New tankyrase homolog protein (THP) polynucleotide and polypeptide useful in gene therapy, diagnosis and treatment or prevention of unregulated cell growth, such as cancer or tumor cell growth.
